

The Business Context & Problem

Context: The sales department uses Zoho CRM to track open deal pipeline. However, sales representatives frequently forget to update their “Final Closing Date” when the deal moved to other stages or got delayed.

Problem: This led to over 40% of the active pipeline data showing the closing date that were stuck in the past. This makes it difficult for the management to accurately forecast monthly sales.

Solution: Create a Zoho dashboard linked to the real time data so that senior leaders can track these unaddressed deals. Adding custom filters allows managers to see exactly which sales representative needs to update their data.

My objective: To clean, manipulate and model anonymised Zoho CRM data exports to design a clean, user-friendly Power BI dashboard layout.

Refer: https://github.com/aditio777-bit/Sales_pipeline for .pbit file.

- KPI Cards- DAX formulae for Number of stale deals, Stale pipeline value in Cr, Average number of days past Final Closing Date.
- Slicers- Filters for Customer Name, Opportunity Owner (i.e. Sales representative), Stage of the deal.
- Funnel- Funnel to show Conversion Rate at every stage of the deal.
- Table- Columns of Customer Name, Amount, Final Closing Date.
